

Whatman 3MM Chr Paper is the most widely used blotting paper. This acceptance and usage reflect the high quality, purity, and consistency that are relied upon by researchers doing Southern, Northern, and Western transfers. 3MM Chr Paper is now available in the most commonly used sizes.

FEATURES

- **Pure Cellulose:** Whatman 3MM Chr Paper is made entirely from the highest quality cotton linters. There are no additives of any kind ever used. This ensures that no contamination will occur during the transfer steps, as can happen when using inferior papers.
- **Special Chromatographic Design:** Whatman 3MM Chr Papers are manufactured and tested specially for chromatographic techniques. This ensures the wicking capability and uniformity of capillary action that is so important in obtaining clean and even transfers during blotting. Just because a paper is thick doesn't guarantee it is a good blotting material.
- **Consistent Quality:** Whatman 3MM Chr Paper was used in the earliest blotting procedures. Manufacturing to specifications for chromatography paper have made 3MM Chr the consistent standard in the industry.
- **Convenient Sizes:** Whatman 3MM Chr Papers are now available in sheets precisely cut to the most popular gel and transfer membrane sizes. This allows "out-of-the-box" usage and eliminates sheet-to-sheet variations.
- **Easy Ordering Procedure:** Whatman 3MM Chr Papers are available through our extensive network of national and regional distributors. You can purchase any of these products in the same manner as your other lab supplies and receive the superior service to which you are accustomed.
